

How to use Ez Trade Builder

If you are an experienced options trader or just learning how to trade options, the right tools are critical to becoming profitable and minimizing your risk. This is a very competitive business with huge potential gains. However, the path to these gains is filled with obstacles and traps. You need the tools that will help you, not only to analyze trades, but also to keep you going in the right direction.

Ez Trade Builder is that tool. There are over 4500 optionable stocks. Ez Trade Builder allows you to define various filters and criteria and then it searches its extensive data bases and “builds” your trades in seconds.

When you set your parameters, Ez Trade Builder immediately provides you with the results!

Now let’s show you how to master Ez Trade Builder and take advantage of this powerful tool.

Ez Trade Builder allows you to:

- Search for the best option trade, based on your criteria, in the entire universe of All optionable stocks
- Select an individual stock or index and search for the best option trades based on your criteria
- Select among the most popular option strategies and perform in-depth analysis of this strategy.
- Build and analyze trades with current data and back test trading system using historic daily option pricing and Volatilities going back to 2006.

Individual Stock Analysis.

To find the best trade of a certain strategy on an individual stock (index), start by simply selecting “One Stock” (“One Index”), the strategy in this case “Put Credit Spread.” and enter the Symbol.

The image shows the Ez Trade Builder interface for a "Put Credit Spread" analysis. The logo is at the top left. To the right are two dropdown menus: "One Stock" and "Put Credit Spread", and a "Select" button. Below these is a form with the following sections:

- Put Credit Spread** (with a help icon)
- Date:** 08/30/2017 (dropdown)
- Symbol:** aapl (input field)
- Trade Duration:** Min 10, Max 65 (input fields)
- Minimum Option Spread Credit:**
 - Spread Range 0 - 3: 0 (input field)
 - Spread Range 8 - 13: 0 (input field)
 - Spread Range 3 - 8: 0 (input field)
 - Spread Above 13: 0 (input field)
- Probability:**
 - Value: (dropdown)
 - 1 Year Historical: (dropdown)
 - END: (dropdown)
- Expected Profit / Loss:**
 - 1 Year Historical: (dropdown)
 - END: (dropdown)
- Customize Your Report:**
 - Sort By: ROI (dropdown)
 - Search: (button)

If a Put / Call Credit Spread or Iron Condor trading strategy is selected **Ez Trade Builder** allows setting a **minimum credit for different spread ranges**. One probably does not want to analyze trades that give a \$0.40 credit on a \$10 spread. That's too much risk with very low reward. That is why **Ez Trade Builder** allows setting **minimum credit for different spread ranges**.

Ez Trade Builder provides the **Trade Duration** field to allow setting minimum and maximum number of days until expiration.

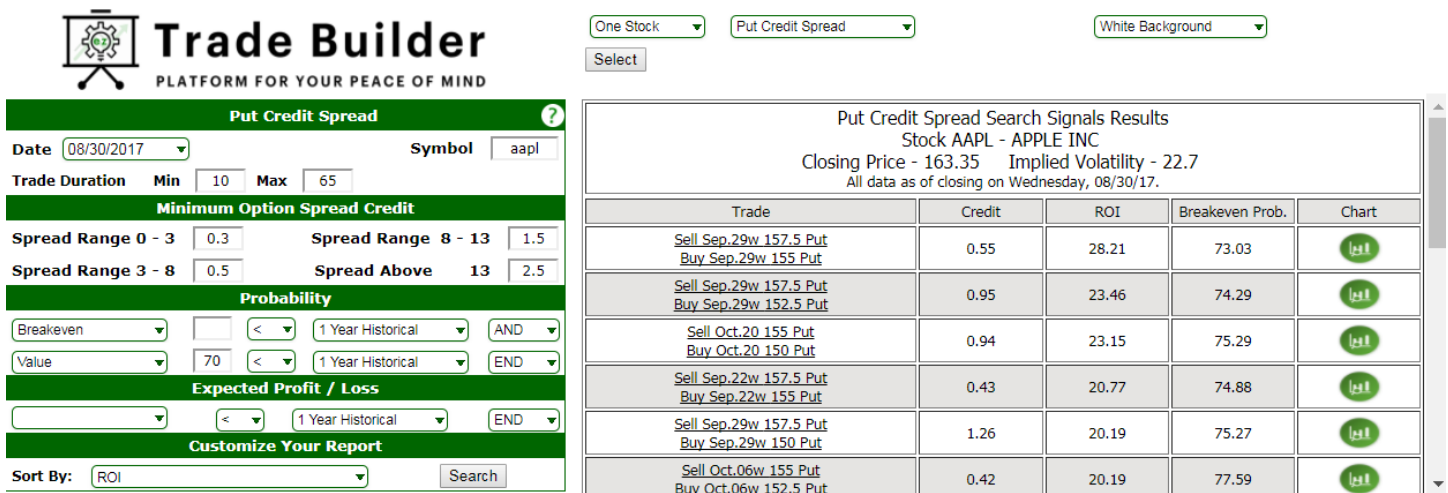

The **Select Search Sequence** drop down window provides choices on how the final results should be sorted. The final result table shows only the 20 best trades, so selecting sorting sequence could be very important if filtering criteria are set very loose and produce more than 20 results.

There are four major filters available in **Ez Trade Builder**:

-  Probability
-  Estimated Profit / Loss
-  Volatility
-  Percentile Range

We will skip the description of these filters, as we will devote separate chapters for each of them.

Now one can click the **Trade Search** button or "Enter" on the keyboard and the following results will appear.

The screenshot shows the Ez Trade Builder interface. On the left, there are several filter sections:

- Put Credit Spread**: Date (08/30/2017), Symbol (aapl), Trade Duration (Min: 10, Max: 65).
- Minimum Option Spread Credit**: Spread Range 0 - 3 (0.3), Spread Range 8 - 13 (1.5), Spread Range 3 - 8 (0.5), Spread Above 13 (2.5).
- Probability**: Breakeven (dropdown), Value (70), 1 Year Historical (dropdown), AND (dropdown), END (dropdown).
- Expected Profit / Loss**: 1 Year Historical (dropdown), END (dropdown).
- Customize Your Report**: Sort By (ROI), Search button.

 On the right, there are dropdown menus for "One Stock", "Put Credit Spread", and "White Background", along with a "Select" button. The main results table is titled "Put Credit Spread Search Signals Results" for Stock AAPL - APPLE INC, with a closing price of 163.35 and implied volatility of 22.7. The table contains 6 rows of trade data, each with a "Chart" button.

Trade	Credit	ROI	Breakeven Prob.	Chart
Sell Sep.29w 157.5 Put Buy Sep.29w 155 Put	0.55	28.21	73.03	
Sell Sep.29w 157.5 Put Buy Sep.29w 152.5 Put	0.95	23.46	74.29	
Sell Oct.20 155 Put Buy Oct.20 150 Put	0.94	23.15	75.29	
Sell Sep.22w 157.5 Put Buy Sep.22w 155 Put	0.43	20.77	74.88	
Sell Sep.29w 157.5 Put Buy Sep.29w 150 Put	1.26	20.19	75.27	
Sell Oct.06w 155 Put Buy Oct.06w 152.5 Put	0.42	20.19	77.59	

The best put credit spreads in Apple with the selected criteria now appear and are ready for further analysis. Details on this analysis will be explained in later chapters.

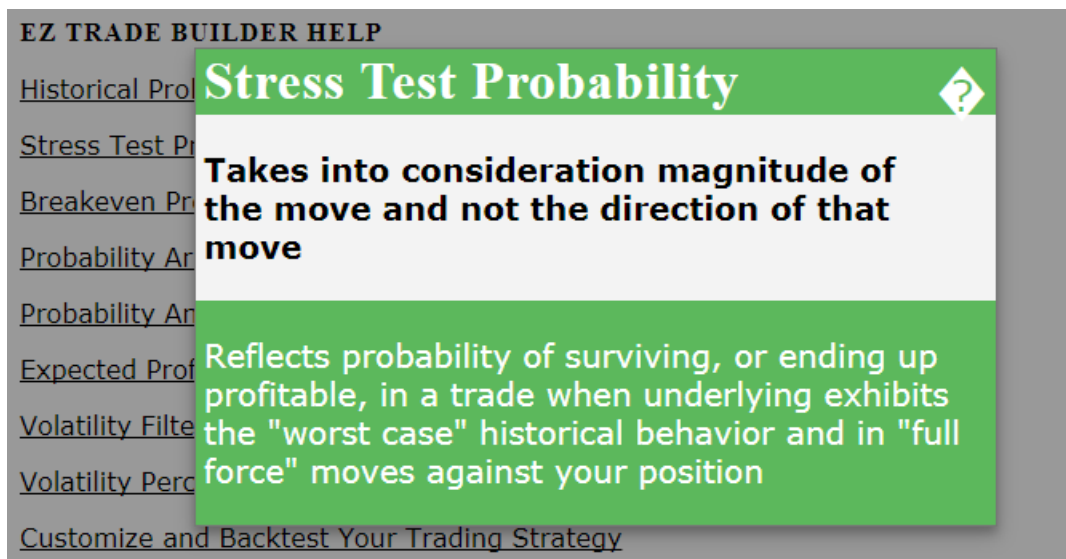

Help.

Clicking on  sign allows to access online help.

The screenshot shows the Trade Builder interface. At the top left is the logo for Trade Builder, a platform for peace of mind. The main configuration area is for a 'Put Credit Spread' strategy on 'aapl' stock, dated 08/30/2017. It includes fields for trade duration (min 10, max 65), minimum option spread credit (spread ranges 0-3, 3-8, 8-13, and above 13), probability settings, and expected profit/loss filters. To the right, the 'EZ TRADE BUILDER HELP' menu lists various topics: Historical Probability, Stress Test Probability, Breakeven Probability, Probability Arbitrage, Probability Analysis, Expected Profit / Loss Filter, Volatility Filter, Volatility Percentile Filter, and Customize and Backtest Your Trading Strategy.

To the right of the screen you can find a list of online help topics. By clicking on Stress Test Probability topic you will get the following

The screenshot shows the 'Stress Test Probability' help topic. The title is 'Stress Test Probability' with a question mark icon. The main text reads: 'Takes into consideration magnitude of the move and not the direction of that move'. Below this, a green box contains the text: 'Reflects probability of surviving, or ending up profitable, in a trade when underlying exhibits the "worst case" historical behavior and in "full force" moves against your position'. The background shows the same help menu as in the previous screenshot.

ALL Stock Analysis.

To find the best trade of a certain strategy on **ALL Optionable Stocks**, start by simply selecting "All Stocks", the strategy in this case "Put Credit Spread." and enter the range of stock prices.

Put Credit Spread ?

Date: 04/13/2017 Stock Price From: 0 To: 1000

For strategies like Short Put / Covered Call **Ez Trade Builder** allows setting a Stock price range filter, as it is too risky to use these strategies with the stocks priced over \$100.

Setting Filtering Criteria. Probability

Probability filter could have up to 3 logical statements. To connect these statements in the last column "END" should be changed for "AND". For example in the sample below we have two logical statements connect with "AND". In the first statement we are comparing Theoretical Probability of Breakeven (calculated based on formula for Normal Distribution and use of Implied Volatility) with 1 Year Stress Test Probability and setting filtering criteria as Breakeven < 1 Year Stress Test.

In the second statement we set "Value" of 80 to be less than 1 Year Stress Test Probability. If you want to compare probability selected in column 4 with some numbers, you have to select "Value" in the column 1 and then specify the number in column 2. In this case the statement will indicate that you want "1 Year Stress Test Probability" to be greater than 80%.

Probability

Breakeven < 1 Year Stress Test AND
 Value: 80 < 1 Year Stress Test AND
 Value: 0 < 1 Year Historical END

If you want to continue adding criteria you can change "END" to "AND" in the last column and a new row will appear, so you can add your criterion.

Expected Profit / Loss

Expected Profit / Loss filter could have up to 3 logical statements. To connect these statements in the last column "END" should be changed for "AND". In the example below we are using only one logical statement. In this case last column should remain "END" as we do not have any continuation of the logical statements.

In this statement we are comparing “Estimated P/L” (calculated based on assumption of Normal Distribution for the underlying asset) with Estimated P/L calculated based on 1 Year of Historical movements of the underlying.

Expected Profit / Loss			
Estimated P/L	<	1 Year Historical	END

If you want to continue adding criteria you can change “END” to “AND” in the last column and a new row will appear, so you can add your criterion.

Volatility

Volatility filter could have up to 3 logical statements. To connect these statements in the last column “END” should be changed for “AND”.

In the example below we are using only one logical statement. In this case last column should remain “END” as we do not have any continuation of the logical statements.

In the example below we are comparing “Implied Volatility” to be greater than “20 Days Statistical Volatility”

Volatility			
20 Days Stat. Vol.	<	Implied Volatility	END

Volatility Percentile

Volatility Percentile has two logical statements. In each of them can be set the following parameters:

1. Number of days that define volatility percentile. In example below it is 400 days.
2. Type of volatility, which is Implied Volatility for the first statement and 5 Days Statistical Volatility for the second one.
3. Percentile range for selected volatilities.

Setting these parameters allow to filtered only for example Expensive / Cheap options depending on the strategy you are analyzing.

Volatility Percentile						
Hist. Days	400	90	<	Implied Volatility	<	100
Hist. Days	400	0	<	20 Days Stat. Vol.	<	100

Saving filtering criteria.

This is a very useful feature and is NOT available in demonstration and educational versions.

Ez Trade Builder allows creating and back testing filtering criteria for each strategy. After this very important and time consuming job is completed, one does not want to remember and manually enter these criteria each time a strategy search is performed.

To simplify the quest for the best trades **Paying Subscribers** can save their filtering criteria into a personal profile.

On the right bottom of the **Ez Trade Builder** screen there are two fields:

Settings	
<input type="checkbox"/> Save Search Criteria	<input checked="" type="checkbox"/> Receive Daily Email Report

After the filtering criteria for a certain strategy has been finalized, the first field (Save current filtering criteria...) should be checked. Now when the **Search** button is clicked, that set of filtering criteria will be saved.

The **Next time** you log into **Ez Trade Builder** and select strategy, saved filtering parameters automatically load and you can click on the **Search** button and get instant results.

That is why we call Ez Trade Builder a TWO CLICK TRADING SYSTEM.

Daily Email with Trading Signals Report.

This feature is available **ONLY** for paid subscribers to **Ez Trade Builder**.

For each strategy customer can set up Daily Email Report with Trading Signals that will be created based on customized filtering criteria that customer saved (see paragraph above) for this strategy.

Set up process is very simple and has only three steps:

1. Save your filtering criteria.
2. Check "Receive Daily Email Report" checkbox
3. Click "Search" button

After all market data will be processed for the day, we will scan our data base to produce your personalized report and email results directly to you.

Customer can view report either on a computer or on a smart phone. No need every night rush to your computer, sign for your service and then learn that there are no signals based on your trading criteria.

You can do most of your analysis via a smart phone device where ever you are; and then make a decision if you need to spend more time on your computer, before finalizing your trading strategy for the next day.

Ez Trade Builder is Easy, Powerful, Convenient.

Here is how this report will look like if you request it for Put Credit Spread:

Put Credit Spread Trading Signals				
<i>All data as of closing on Thursday, 04/13/17.</i>
